Clear trend in all three: the rate rises with depth, block 1 lowest (0.10-0.25x) and blocks 5-6 highest (about 2-3x); a power law fits better than an exponential.
SGD's single orders scatter widely around it (d1: blocks 1-2 at 0.1-0.14x, block 5 at 7.7x); AdamW and Muon have one order each.
